CERN Roadshow in Finland - 6 April 2017

Opportunities in CERN experiments→ Examples from CMS and CLOUD

Antti Onnela
CERN – Experimental Physics department – Detector Technologies group

Outline

- Upgrade of the CMS experiment
 - Ready by 2025
 - Major investments and many opportunities through the next 8 years
- CLOUD experiment
 - Outside of high-energy physics

CMS upgrade

CMS upgrade

was ready in 2008. gned for 10 years of LHC ration, which will be the check in 2023.

upgrades being done, right now Pixel detector acement – with major ish involvements (HIP, acam).

h luminosity LHC in 2026. higher intensity of icles than in LHC.

5, like other LHC eriments, need to have ajor upgrade.

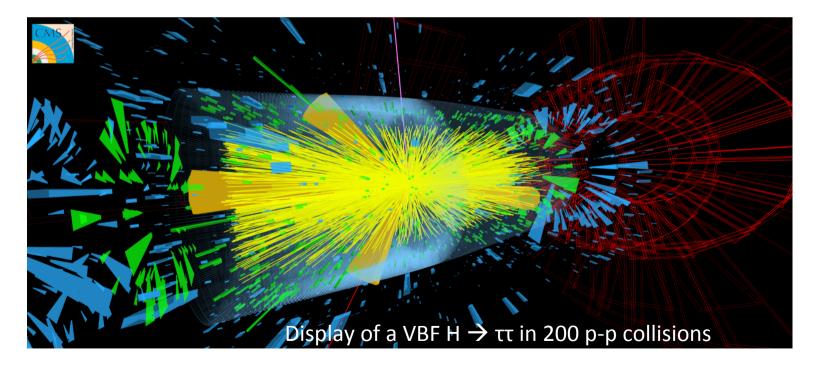

CMS Upgrade

Goal: Maintain and improve physics performance at 10x higher luminosity

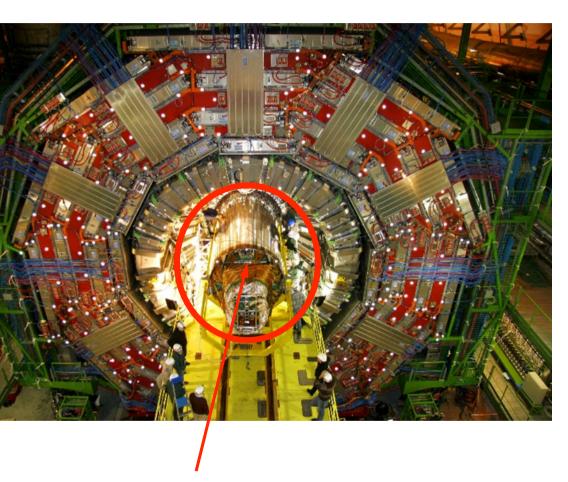

- More radiation hard detectors \rightarrow survive in the harsh radiation conditions.
- Lighter detectors and structures next to interaction point

 better physics.
- Better read-out

 handle higher data rates.

CMS upgrade: Main items

Tracker to be replaced

End-cap calorimeters (2x) to be replaced

CMS Upgrade: Cost estimate

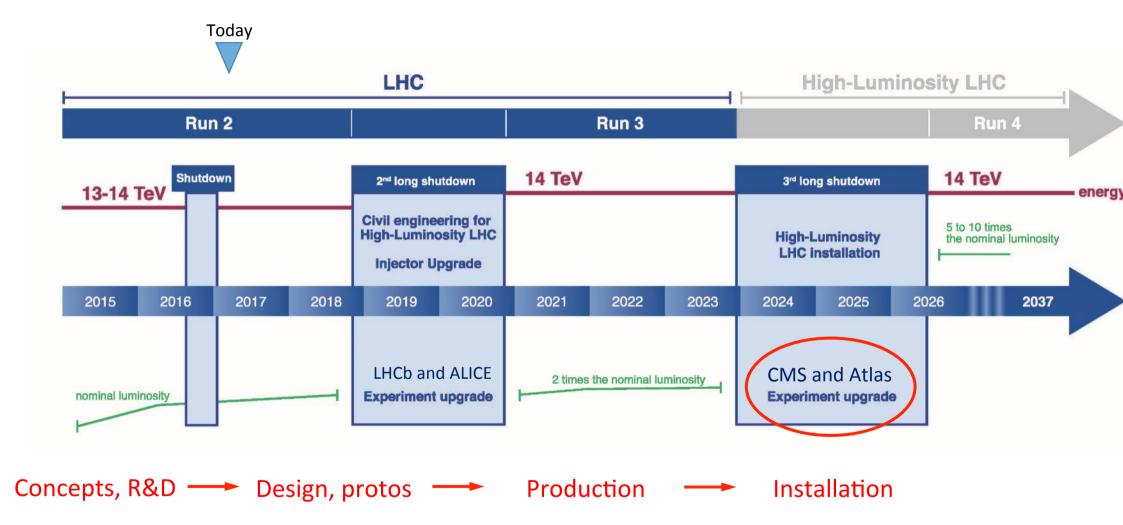

Pixel Detector 23 Outer Tracker 89 Tracking System 112 EB electronics 10 HB scintillators 1 Endcap HGC+BHE 64 Calorimeters 75 DT and CSC electronics 10 Muon stations:GE11,GE21, RP31 and RP41 10 Muon extension ME0 5 Muon Systems 25 Beam Monitors and Luminosity 4 L1 Trigger 7 HLT 11 DAQ 6 Trigger and DAQ 24	9 Euro

CORE costs cover materials and services for the production phase of the project.

Other costs (not in CORE): R&D and prototype costs for the design development; infrastructure, facility and personnel costs at CMS institutions; maintenance.

Upgrading of CERN's main accelerators and experiments

CMS upgrade: Cost profile (CORE)

In addition: Further costs on R&D, prototypes and engineering, not counted in these CORE costs.

CMS upgrade: What and who is involved?

- Wide range of fields involved, from semiconductor detectors and electronics to mechanics and software.
- Production in industry and collaborating institutes (components, sub-assemblies) and at CERN (final assemblies).
 - Opportunities for product and methods development, expanding of know-how.
- In addition to physicists, many engineers and technicians needed.
 - Professional opportunities on leading edge technologies.
 - Training opportunities at CERN and in institutes.

Why CLOUD?

What influences climate changes?

This graph shows radiative forcing on Earth's atmosphere.

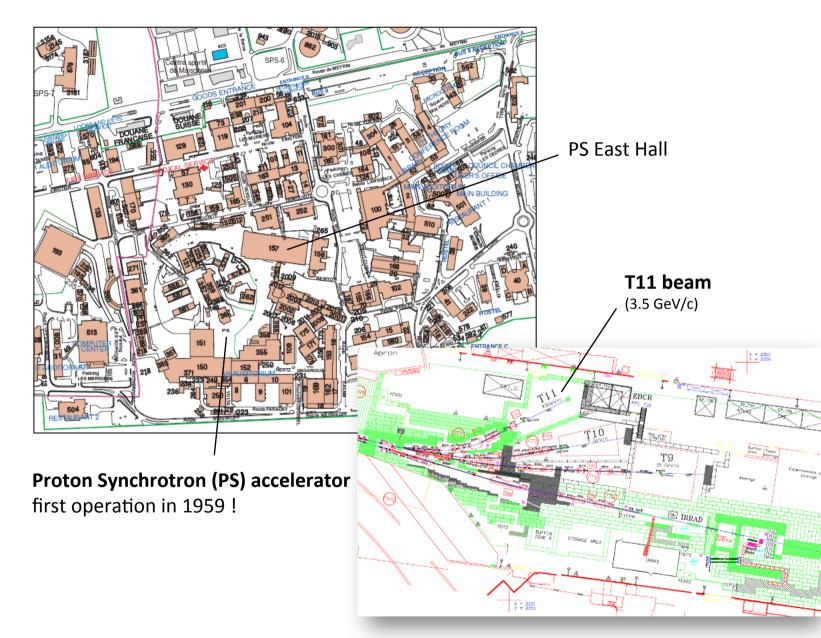

Source: IPCC, Summary for Policymakers, 20:

- A. Anthropogenic aerosol forcing are poorly understood.
- ★ B. Natural part is very small.
 Is there a missing natural forcing?
 Is that from varying cosmic ray flux,
 modulated by sun?

 $A + B \rightarrow$ The CLOUD experiment

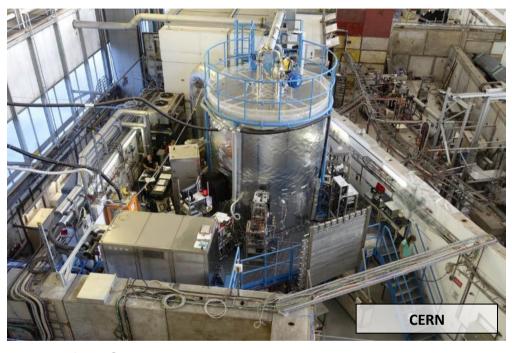

Why at CERN?

- Controlled 'cosmic rays'
- Beam from PS
 - Low energy beam, limited interest to highenergy physics.
- Existing CERN know-how is very useful!
 - Ultra-clean surfaces and gas systems
 - Vacuum
 - Thermal control
 - Radioactive sources
 - Etc.

Close links between field measurements and CLOUD

Example of measurements at CLOUD: Recreating of boreal forest conditions, to understand the observed aerosol particle nucleation and growth.
